

**BASIC COURSE 3**

HANDS-ON COURSE

# SETUP – FULL DENTURES IN PHYSIOLOGICAL OCCLUSION

## BASIC COURSE 3

The focus is on learning, refreshing and expanding the basic principles of tooth placement in tooth-to-two-tooth occlusion for full dentures. The systematics from the model analysis through to placement are imparted. The systematic correction of the occlusion into centric and eccentric follows after complete tooth placement. And finally, the design of the gingiva is modeled in wax according to myodynamic aspects.

### COURSE OBJECTIVE

Elaboration of the basics for the functionality of full denture restoration as well as the physiological tooth-to-two-tooth relationship in static and dynamic occlusion. Understanding and applying the model analysis for a statically stable tooth setup to guarantee the autonomous chewing stability of the posterior teeth. Setting up the anterior teeth in wax according to averaged anatomical references. Setup of the posterior teeth according to static principles based on the model analysis performed. Application of the developed rules for static and dynamic occlusion. Application of the design principles of a muscle-grip and myodynamic denture body design in wax.

### RECOMMENDED PREVIOUSLY COMPLETED COURSES OF THE SSOP BY CANDULOR

Basic course 2: The technical foundation of full dentures

### COURSE TOPICS AND SEQUENCE

1. What full dentures must perform
2. Physiological setup—the principle
3. Static and dynamic occlusion in the tooth-to-two-tooth relationship
4. Model analysis
5. Anterior tooth setup
6. Posterior tooth setup with the Bonartic II NFC+
7. Static and dynamic occlusion check
8. Wax modeling – papillae, tooth necks, and myodynamic denture body design

### FOR

Master dental technicians, dental technicians, dental technician trainees, dental technician master students, dentists, students of dentistry supporting clinical education, prosthodontists, clinical dental technicians

### DURATION

2 days

### PARTICIPANTS

8–10
