

Designing natural gingiva through characterization

The SSOP presents a new workshop in its portfolio.

Characterization is indispensable for a denture that aspires to look as natural as possible. In hectic times and with increasing digitization, the characterization of dentures has become a sought-after skill in the technical dental field. The SSOP supports laboratories in refreshing and deepening this knowledge and skill.

To this purpose, it is launching a new format in its continuing education portfolio with the one-day workshop "Esthetic Gingiva". The focus is placed on a hands-on demonstration and exercise on the topic of characterization. The individual color design of the denture is developed step by step. By analyzing the different gingival layers and their specific color system, a scheme can thus be transferred to the denture. The result is a denture which comes very close to a natural gingiva.

The focus of this SSOP event is also on individual learning success. The SSOP achieves this through its didactically designed program, its professionally trained teachers, and its in-house accompanying teaching materials. The products used in this workshop are of course, as usual, provided by CANDULOR. The SSOP also offers training courses in-house, so that entire laboratory teams can be trained at the same time. More information on the subject can be accessed on the SSOP website www.ssop.swiss.

Specialists in prosthetics.

CANDULOR stands for high-end prosthetics in the field of partial, full and implant-supported restorations. The dental company, with headquarters in Switzerland, was founded back in 1936 and offers a complete prosthetic system for dental technicians and prosthodontists. CANDULOR products are used in high-quality prosthetics that combine esthetics, design and functionality and meet the most demanding requirements for quality and individuality. With the unique SSOP training concept, CANDULOR contributes significantly to maintaining, sharing and further developing prosthetic expertise and practical know-how in the dental industry. The ISO 21001:2018 certified educational institution with its globally positioned team of teachers from academia and practice offers a training concept for the dentistry and dental technology sectors that meets the current requirements for sustainable knowledge transfer. The training courses range from theoretical courses to practical hands-on courses, through to complete modules. An additional service offered is the SSOP consulting program, which enables individual continuing education and best practice consulting for practice or dental laboratories on site. For more information about SSOP see www.ssop.swiss
