

# Intraoral registration, how does it work

Registration | Hands-on

# Intraoral registration, how does it work

The focus here is on the assembly and use of the CRS Set 10, as the classical determination of the jaw relationship. We start with bite registration and demonstrate the integration of the CRS Set 10 components in this workshop. A theoretical part with practical exercises will lay the foundation for the practical implementation.

## Learning objectives

Participants learn how to classify the jaw relationship and how to prepare and perform support pin registration.

## Recommended experience

- › Advanced 3–5 years
- › Expert >5 years

## Format

- › Presence

## Topics

- › Jaw relationship
- › Integration of the CRS Set 10

## For

- › Dental technicians
- › Prosthodontists
- › Clinical dental technicians

## Duration

1 Day

## Category

- › Workshop
