Registration – theory meets patient

Successful removable dentures are based on impeccable working documents for practice and laboratory. The anatomical initial impression, the functional impression, the pre-bite registration as well as the determination of the final jaw relation with the intraoral support pin registration are elaborated extensively based on an thorough examination of the patient.

Learning objectives

The participants will be able to structure and classify the subsequent steps and work processes with the help of the medical history. Taking the impressions and implementing the jaw relation, as well as creating and assessing the insertion and implementation of support pin registration.

Recommended experience

- › Advanced 3–5 years
- › Expert >5 years

Format

- › Presence

Topics

- › Medical history of the patient
- › Analysis of the existing denture
- › Anatomic and functional impression
- › Esthetic control template
