

# Solving crossbite and angle, complex bite positions with full dentures

Setup technique | Hands-on

# Solving crossbite and angle, complex bite positions with full dentures

This course elaborates solutions for complicated full denture bite situations (patient cases). Participants will bring their patient case mounted in the articulator to this course and develop a setup independently in the hands-on phase with the help of our teacher.

## Learning objectives

Participants will be able to apply their newly acquired knowledge to the patient situation in a differentiated manner. Model situations, jaw relationships and patient analyses can be identified, classified and assessed. The development of a ridge-adequate setup for crossbite and consideration of the angle classes can be performed.

## Recommended experience

- › Expert >5 years

## Format

- › Presence

## Topics

- › Model analysis
- › Better assessment of the crossbite situation
- › Alveolar ridge situations
- › Solving angle classes with prosthetics

## For

- › Dental technicians
- › Prosthodontists
- › Clinical dental technicians

## Duration

2 Days

## Category

- › Advanced course
